

COSUMELT

CREATIVE METAL CONSTRUCTIONS

COSUMELT  
CREATIVE METAL CONSTRUCTIONS

Cosumelt creates custom made metal constructions for indoor and outdoor conditions.

Unique solutions require a good and precise engineering work, well-organized production and installation processes.

The most perfect results in combining and installing metal constructions with glass, wood and other materials can be achieved only through the long-term professional experiences. We do have them.

Each and every complicated construction is for us a new challenge we take up with interest. We shall accomplish every order as best as we can.

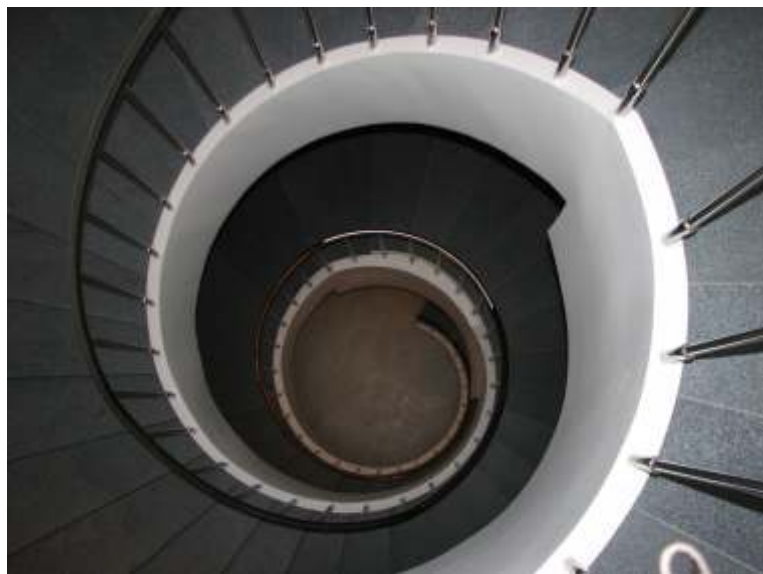

The main articles provided by Cosumelt are framings, balconies, staircases, winding stairs, railings, awnings and other metal constructions. In the manufacturing process different materials and coatings will be applied.

Initially our enterprise has started its activities in Estonia, where presently also our production and management centre are located. In the course of the time our business has been focused mostly to the Scandinavian countries. During the last years we have successfully co-operated with several Scandinavian construction companies and also with Finnish Government authorities.

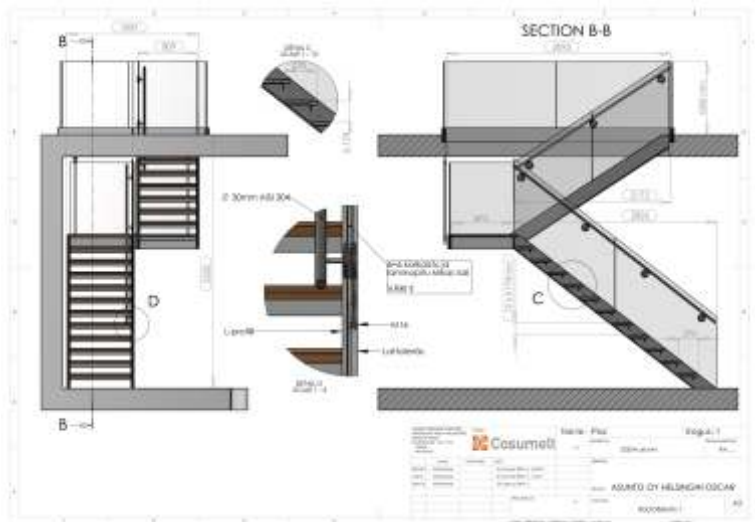

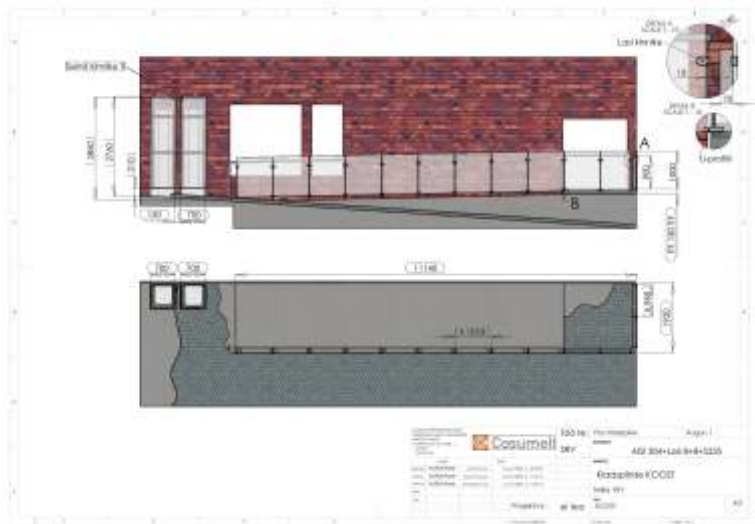

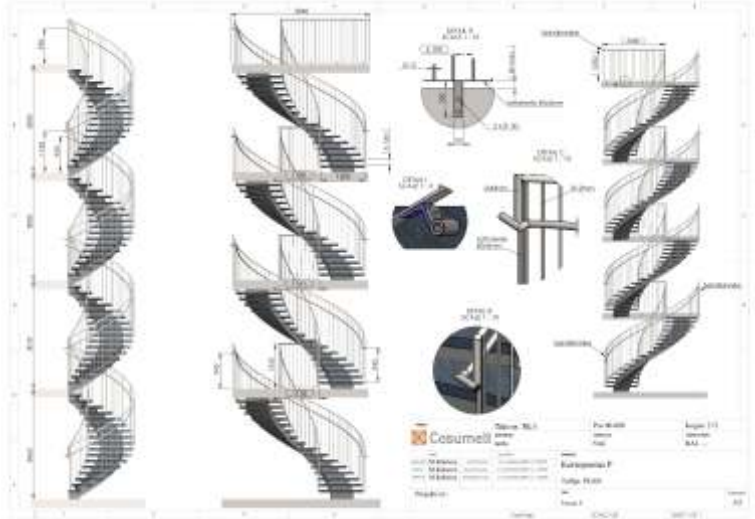

We can trust our work and quality, because we are committed to the process from the very beginning to the finishing touches.

Our engineering team includes six high-quality professionals who operate modern CAD-systems and take full responsibility for large-scale projects.

Our flexible production process specializes in unique metal constructions for both indoor as well as outdoor usage. The production team is motivated to seek inventive solutions and perform non-conventional work.

Last but not least installation of constructions. Every person belonging to this team is fully aware of the meaning of its individual contribution to the overall quality and to the trade mark of Cosumelt. This team will do its best in order to achieve most accurate and fast results.
